

◆ CREATIVE TECHNOLOGY.

EDELRID 

# Foreword

Creative Technology. We've pulled out all the stops for 2012. The new EDELRID collection combines innovative engineering, made in Germany, with outstanding creativity. We feel that this is the best EDELRID collection yet.

2012 sees the introduction of our patented DuoTec technique, which marks a further milestone in innovative rope manufacturing. The two new additions to our Entrance Line feature this technique for making bi-colour ropes. Needless to say, both the Viper 9.6 mm and the Boa 9.8 mm are manufactured in accordance with the stringent bluesign® standard.

With the Cable Vario, EDELRID is once again setting new standards for via ferrata safety. It's the first ever via ferrata set where braking resistance can be individually adjusted according to the weight of the user. This development is going to revolutionise the future of via ferrata sets.

EDELRID's new ice tools cover all aspects of winter mountaineering. Their intelligent, modular design means that they can be adapted to suit all routes and conditions.

EDELRID helmets go from strength to strength. Two new models, Shield II and Zodiac, continue the winning formula of innovative technology, attractive design and outstanding comfort.

Climbing shoes have formed an important part of the EDELRID portfolio for two years now. 2012 sees the addition of four new models. The Sigwa is a top-class shoe with superb edging stability and optimal sensitivity in the toe area.

The EDELRID developers have designed a completely new product range: alpine rucksacks. Two new technical packs provide a secure, positive carry and a raft of sophisticated features. As you would expect, they benefit from EDELRID's unique design for instant brand recognition.

EDELRID clothing incorporates casual, comfortable styling with robust climbing-specific detailing. The new range includes several pieces in technical performance fabrics. See, for example, the Commander soft-shell pants – an essential item in anyone's outdoor wardrobe.

We're proud to present such a comprehensive collection of innovative products and look forward to a successful 2012 season.

### **„Our ropes are eco-friendly“ - Respecting the environment**

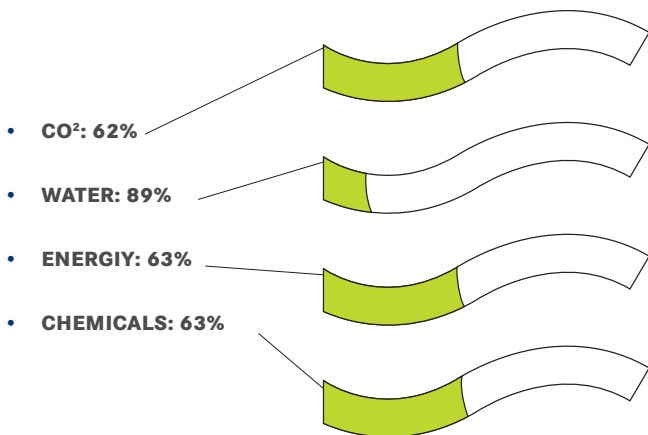

Quality and safety are the key to making responsible and innovative high-performance ropes. EDELRID has been following this maxim for the past 149 years. Our ropes and experience in manufacturing them are the heart and soul of our long-established brand.

To further extend our quality and safety standards, we have been working with bluesign® technologies ag from Switzerland since 2009. We are the first rope manufacturer to adapt our ropes to meet the tough demands of the bluesign® standard. The bluesign® standard is the most stringent environmental standard for the production of functional textiles. It is independent, internationally recognized and based on the five principles of sustainability. These include resource productivity, emissions protection, safety at work and consumer protection. The bluesign® standard's goal is to follow these five principles throughout the whole textile manufacturing chain.

EDELRID has set new industry benchmarks for innovative and sustainable rope production. All the materials used to make our ropes are bluesign®-approved fabrics. We can therefore guarantee as few pollutants as possible without making any compromises in terms of functionality, quality and design. Our ropes carry the bluesign® product label thanks to their combination of certified source materials and our advanced rope production facilities in Isny. The bluesign product label is a sign of quality. It guarantees an eco-friendly manufactured product that is low in pollutants and safe for health and the environment. As such, we have responded to consumers' natural demands for safe, environmentally friendly and sustainable products.

# bluesign®

Three years of bluesign® allow us to draw on in-depth experience of sustainable rope production. By converting all our rope production to the tough demands of the bluesign® standard we were able to make the following efficiencies when dyeing sheath yarns:

 Conventional rope production

 bluesign® certified EDELRID production

For EDELRID this represents a further step towards a sustainable future. We have consistently pursued the task of pushing forward sustainable rope production so that we can continue to inspire trust in the future. We do not consider these measures a virtue, but a natural response to demands of the modern world.

As the inventor of the kernmantel rope, we continue to set new standards. We can now confidently say that our ropes are eco-friendly.

# Our Dynamic Ropes.

## Your Passion.

### Pro Line

The newest manufacturing technology and a highly elaborate finishing process are the characteristics of the Pro Line. It unites minimal weight and diameters with technical advances and superior handling. This makes the Pro Line your ideal partner for pushing the limits when every gram counts. Pro Line's advantage lies in the new Pro Shield finishing process, one of the newest developments from EDELRID.

#### Pro Shield:

Extremely strong ropes through the Pro Shield finish.

#### Dry Shield:

Water and dirt resistant thanks to the Dry Shield finish.

#### Thermo Shield:

Perfect handling with the Thermo Shield treatment.

#### bluesign® approved product:

A product made using strictly regulated environmentally-friendly processes that contains no harmful substances.

### Swift 8,9 mm

A single rope, which complies to the twin and double rope standards. At just 8.9 mm the Swift is one of the thinnest single ropes on the market, making it the best choice for avid sport climbers looking for minimal weight and diameter as well as mountain guides and mountaineers looking for a rope that can master all climbing disciplines on rock and ice. EDELRID Pro Shield treatment protects the core and sheath against grim and wet while the Thermo Shield ensures perfect handling and flexibility. Attention: this rope is not suitable for working routes or top roping.

bluesign  
product

### Kite 9,2 mm

The Kite is the ultimate rope for climbing at the upper limits of today's climbing grades. Minimal weight, small diameter, and optimum handling describe this specialist rope. The Pro Shield treatment on the Kite repels moisture, dust and dirt, while the Thermo Shield treatment gives the rope the unique EDELRID handling properties of durability and suppleness. Not suitable for working routes or top rope climbing.

### Falcon 9,4 mm

Extremely light yet robust, the Falcon is ideal for hard routes, on-sight, flash or redpointing when every gram counts. With our new special Pro Shield treatment, the Falcon is ideal for mixed routes and ice climbing. EDELRID's Thermo Shield treatment gives the rope perfect handling properties.

#### Falcon bicolor\*

To mark the middle of the rope, the braiding spoils are changed halfway through the braiding process to create two distinctly different sheath patterns. Each rope length has a different color.

### Eagle 9,8 mm

A universal lightweight rope for climbing in alpine, crag or indoor conditions. With EDELRID's new and highly efficient Pro Shield treatment, the Eagle offers the perfect protection for wet or dirty conditions. Equally at home on fast alpine ascents where snow or rain can be expected, or on a warm sunny day at the crag, the Eagle fulfils the task with flying colors. EDELRID's Thermo Shield handling coupled with the Pro Shield helps provide excellent handling at an amazingly low weight of 62 g per meter.

#### Eagle bicolor\*

Easy to find the middle with the pattern change.

### Apus 7,8 mm

The EDELRID Apus complies with both twin and double rope standards, making it the ideal rope for alpine, mixed and extreme mountaineering where every gram counts. Despite a very low weight of just over 2 kg for a 50 m length, the Apus can hold an amazing 20 double rope test falls and 8-9 in the twin rope test. This makes the Apus one of the lightest twin ropes on the market with high a degree of safety. The EDELRID Pro Shield treatment keeps the rope dry and dirt-free while the Thermo Shield helps keep the rope supple even after heavy and prolonged use.

## Dry Line

The Dry Line is EDELRID's ideal allround rope series. Minimal weight, high strength and durability are all perfectly balanced. Ropes treated with the Dry Shield finish are resistant to water, dust and dirt. The Dry Line is the only choice when it comes to choosing a rope for a multiple of activities.

### Dry Shield:

Water and dirt resistant thanks to the Dry Shield finish.

### Thermo Shield:

Perfect handling with the Thermo Shield treatment.

### bluesign® approved product:

A product made using strictly regulated environmentally-friendly processes that contains no harmful substances.

**NEW**

### Heron 9,8 mm

The Heron is the new flagship in the EDELRID Dry Line. Its low weight, high strength and excellent handling perfectly complement each other. The Dry Shield finish protects against moisture and dirt, while the EDELRID Thermo Shield finish ensures smooth handling. These characteristics make the Heron the perfect all-rounder. Whether sport routes or winter climbing, the Heron is suitable for all conditions.

**NEW**

### Harrier 10,0 mm

The new Dry Shield finish has helped us reduce the diameter on the Harrier, a classic EDELRID rope, without reducing its strength. With the advantage of this tough construction, the Harrier is useable in both the mountains and low-lying crags. The Dry Shield finish protects against moisture and dirt. The Thermo Shield treatment guarantees an agreeable handling even after a lot of use and abuse.

**NEW**

### Kestrel 8,5 mm

We've made the sheath even thicker on this EDELRID classic. As a result, you get an extremely robust half rope with unparalleled quality and durability. The thicker sheath and water- and dirt-repellent Dry Shield finish make its particularly suitable for alpine mountaineering and ice climbing. If climbing in a team of three, the Kestrel also provides extra safety when bringing up two seconds. If you want a half rope with additional security and extended durability, then the Kestrel is what you are looking for.

## Sports Line

The Sports Line has become the choice of sport climbing champions. The double-braid construction creates a particularly tight and smooth sheath which is very abrasion resistant and the Thermo Shield treatment provides the famous EDELRID handling characteristics. Those who have tried these ropes once have become permanent, convinced users. Anyone searching for a rope that will be worked hard, the Sports Shield is the right choice.

### Sports Braid:

Double braid construction for an especially compact and smooth sheath structure.

### Thermo Shield:

Perfect handling with the Thermo Shield treatment.

### bluesign® approved product:

A product made using strictly regulated environmentally-friendly processes that contains no harmful substances.

## Hawk 10,0 mm

NEW

Those looking for a rope that can be worked hard make the right decision when choosing the Hawk. With a weight of only 63 g per meter, the Hawk is a super lightweight for its class. This weight advantage, coupled with our Thermo Shield treatment and its sport braid sheath construction makes this an ideal choice for all types of sport climbing.

Nº	71073
UIAA	6
Weight	62 g/m

bluesign  
product

## Osprey 10,3 mm

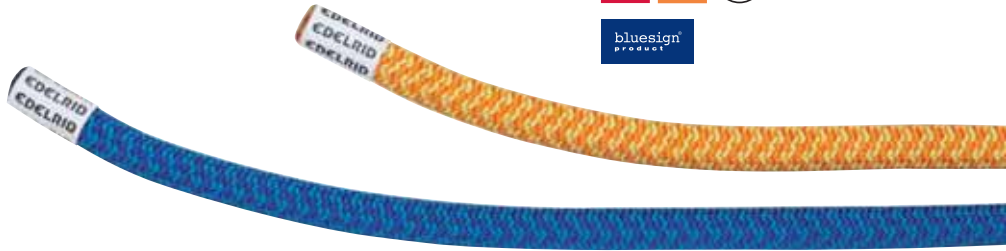

NEW

For crag climbing there isn't a better rope. The particularly tight Sports Braid sheath construction in combination with slightly thicker yarns has given the Osprey an incredibly tough and durable sheath. This is why even after many falls the Osprey looks almost as good as new.

Nº	71072
UIAA	9
Weight	68 g/m
Ø	10,3 mm
Flame	024 flame

bluesign  
product

## Shikra 8,5 mm

NEW

The Shikra is particularly good for trad climbing where a double "sport" rope is needed. Its slightly thicker diameter and thicker sheath provide an extra margin of safety when one rope is heavily loaded during a fall or when climbing in a team of three. The Shikra's special double Sports Braid construction provides extra abrasion protection on particularly rough rock like sandstone or granite. The Thermo Shield treatment provides easy and supple handling for this EDELRID rope.

## Entrance Line

Proven EDELRID quality and excellent value for money describes the Entrance Line. The sturdy construction of the Entrance Line makes this rope a constant companion at the crag and in the gym.

### Thermo Shield:

Perfect handling with the Thermo Shield treatment.

### DuoTec:

Permanent marking in middle of rope and distinctive design.

### bluesign® approved product:

A product made using strictly regulated environmentally-friendly processes that contains no harmful substances.

### Viper 9,6 mm NEW

A lightweight, smaller diameter single rope with optimal handling. The Viper is particularly suitable for sports routes. The thicker sheath (45%) means makes it extraordinarily robust, despite its smaller diameter. Our new DuoTec process provides permanent marking in the middle of the rope and a distinct design.

Nº	71089
Nº	71088 DuoTec*
UIAA	5
	60 g/m

### Boa 9,8 mm NEW

The Boa is a good introductory rope to the sub 10.0 mm diameter range. The 9.8 mm Boa is a very universal rope that features EDELRID's Thermo Shield treatment, giving it excellent handling properties. Our new DuoTec process provides permanent marking in the middle of the rope and a distinct design.

Nº	71079

UIAA	6
	62 g/m
∅	9,8 mm
	138 oasis*

### Python 10,0 mm

An ideal rope for the price- and quality-conscious climber. Even though it's a great value, the handling qualities of the Python are the equal of much more expensive ropes, and makes climbing and belaying a pleasure from the very first day. Surprisingly light and durable for a rope in this price range.

Nº	71080
UIAA	7
	64 g/m
∅	10,0 mm
	153 lead

### Cobra 10,3 mm

A robust, abrasion resistant single rope and great value for the money. Its robust construction and the Thermo Shield treatment make the Cobra a reliable companion for cragging and indoor climbing.

Nº	71081
UIAA	8
	68 g/m
∅	10,3 mm
	047 snow

## Tower 10,5 mm

The special braided core construction of the Tower is extremely flexible and robust, making it well suited for a life as a top rope and for the extremely dry and dusty conditions at a climbing gym. The unique core construction also reduces core herniation, which can occur due to excessive top roping. With the EDELRID Dry Shield finish and Thermo Shield treatment the Tower still maintains the traditional characteristics of an EDELRID rope: suppleness, good handling, and abrasion resistance. This rope is suitable for climbing beginners but performs excellently outdoors as well.

# Our Harnesses. Your Success.

## Laminated construction:

For optimal load transmission with minimal weight.

## E-Turn:

Optimum user comfort, safety and ease of use with the E-Turn buckling system.

## Protektor:

Hytel®-Protector increases harness longevity.

## Smith

The Smith harness combines optimal comfort and minimal weight, and sets new standards for high-end harnesses. The Tri-Laminate technology ensures the perfect distribution of pressure and load on the waist loop, and the anatomically formed leg loops with elastic mesh insert mold snugly around the thighs. The E-Turn system raises the comfort level and user friendliness of this single buckle harness. In addition the Smith is fitted with four fixed gear loops and one chalk bag loop. To increase the lifetime of this harness, the Smith is fitted with a Hytrel®-Protector at the tie-in point.

Nº	71665
	370 g
SIZE	XS   S   M   L
	126 oasis-pebbles
	738 night-pebbles

## Creed

The Creed banishes the need to decide between weight and comfort when going alpine climbing. This harness is a three buckle design for extreme use and incorporates the Tri-Laminate technology. EDELRID is the first manufacturer to integrate quick-adjust 10 mm Easy-Glider buckles in the leg loops. Combined with the elastic mesh insert, the leg loops meet all the comfort needs of a sport harness but have full adjustability. This adjustability allows the harness to fit – whether you're sport climbing with light clothes in summer or mountaineering with heavy insulation in winter – and fulfills the safety standards despite its very low weight. E-Turn, Hytrel®-Protector, and four asymmetrical gear loops make the Creed an unbeatable alpine harness.

Nº	71666
	380 g
SIZE	S   M   L
	044 sahara-pebbles
	738 night-pebbles

## Korben

The lightweight Korben is a real all-rounder. Regardless if you are sport or alpine climbing this harness is perfect in all terrains. Fitted with all the features that unify minimal weight and maximum comfort, the Korben has Tri-Laminate construction, Hytrel®-Protector at the tie-in point, and the combination of 10 mm buckles and 3D mesh in the leg loops. To keep the tie-in point and the four gear loops centered, the Korben is fitted with two buckles on the waist loop using the E-Turn system, which also give this harness a large adjustment range for added versatility.

Nº	71667
	410 g
SIZE	S   L
	052 royal-pebbles

## Loopo

An ultra light harness for performance-oriented sport, indoor and competition climbing. The Loopo works without a buckle (the aluminium quick clip is for positioning support only), helping to reduce the weight to only 265 g, making this EDELRID innovation the lightest fully functional padded harness on the market. A very high level of comfort is attained through the Triad®-System and the ergonomic design which hugs the waistline and thighs giving maximum sitting comfort. The Loopo's low tie-in point enhances clipping and paying out rope when belaying. The Loopo comes standard with two integral and extremely sturdy gear loops. Additional gear loops can be attached if required. The Loopo is a no-compromise harness for all vertical disciplines where minimum weight and maximum comfort are required.

## Loopo Light

The Loopo Light has been designed for high alpine touring, back country skiing and glacier walking situations where minimum weight and maximum breathability are desired. The Loopo Light is perfect however for Via Ferrata, or as a spare harness fitting into almost any pocket. With a weight of only 210 g, the Loopo Light is one of the lightest, fully functional climbing harnesses on the market. The fully breathable mesh provides unbeatable comfort and the Triad®-System ensures a close, ergonomic fit and the two patented Slide Rail®-System gear loops can be positioned wherever desired on the harness. This harness has become an absolute favorite amongst mountain guides.

# Our Harnesses. Your Comfort.

## Adjustable foam padding :

To center tie-in loop and gear loops.

## Protektor:

Hytrel®-Protektor increases harness longevity.

## Triad-System®:

Unbeatable fit in the leg loops.

## Moe

The Moe is a very comfortable ergonomically cut harness. The moveable foam waist padding allows the tie-in area to be centralized and ensures an optimal positioning of the four fixed gear loops. The Triad®-System and longer elastic provide a perfect leg loop fit and the Hytrel®-Protector on the tie-in loop protects the webbing from abrasion while the 28 mm Easy Glider buckle is easy to adjust and close. The Moe is a comfortable and very robust sport climbing harness.

	642 slate-violet

## Jay

**NEW**

The Jay is the real all-rounder in the EDELRID collection. This harness features adjustable leg loops, flexible gear loops, positionable waist padding and Hytrel®-Protector on the tie-in loop, which protects the webbing from abrasion. Finishing it off, EDELRID's 28 mm Easy Glider buckle is used the waist belt while the 20 mm buckles are perfect for the leg loops. The Jay is an ideal all-around harness for all types of climbing.

	775 pebbles-sahara

## Duke

**NEW**

With its large adjustment range and safety features, the Duke is ideally suited for training and rental use. The Duke is fitted with two EDELRID Easy Glider buckles in the waist belt and fully adjustable leg loops. The two-buckle system in the waist provides for optimal centering of both the tie-in loop and the haul loop at the back regardless of climber size. Additionally, there are four flexible gear loops, and the Hytrel®-Protector on the tie in loop safeguards against rope abrasion. As a fully adjustable, comfortable harness, the Duke's components and features also make it a great all-around harness.

N°	71653
	530 g
SIZE	S   L

	630 slate-pebbles

### Austin

The Austin is a tough rental-oriented harness ideal for courses and climbing walls. The adjustable padding in the waist loop is easily centered and allows a greater sizing range. Different colors identify the harness size at a glance, and the waist and leg loops are distinguished from each other by their different colors, making the orientation of the harness much easier for beginners. Features two robust gear loops and the integrated "window" for individual marking of the harness, while the Hytel®-Protector reduces the rope abrasion at the tie-in point, helping to extend the lifespan of the harness.

### Solid

The Solid is a lightweight full body harness ideally suited for Via Ferrata. The clip in buckles allow the harness to be completely opened and put on like a jacket, which is advantageous when the harness has to be put on in steep terrain or when wearing mountaineering boots or crampons . For clarity, there is color differentiation between waist and leg webbing and “left-right” tabs on the leg loops. Gear loops allow Via Ferrata sets and other pieces of gear to be clipped out of the way when not needed.

Nº	71625
	440 g
SIZE	S   L
	219 night-oasis

### Fraggle

The Fraggle is a padded full body harness for children up to 40 kg. Its padding helps maintain its shape and makes it easier to put on and take off. The Fraggle is a fully-fledged harness with an additional tie-in loop at the back for securing when on rough or steep terrain.

Nº	71617
	300 g
SIZE	XXS
	138 oasis

### Agent

The Agent is far superior to conventional chest harnesses with their endless buckles. The classic figure-of-eight shape has just one Easy Glider buckle. Its weight-saving construction is padded to improve ventilation. The Agent can be worn under a rucksack and used with all sit harnesses. Chest harnesses should only be used in combination with a sit harness.

Nº	71616
	200 g
SIZE	S/L
	017 night

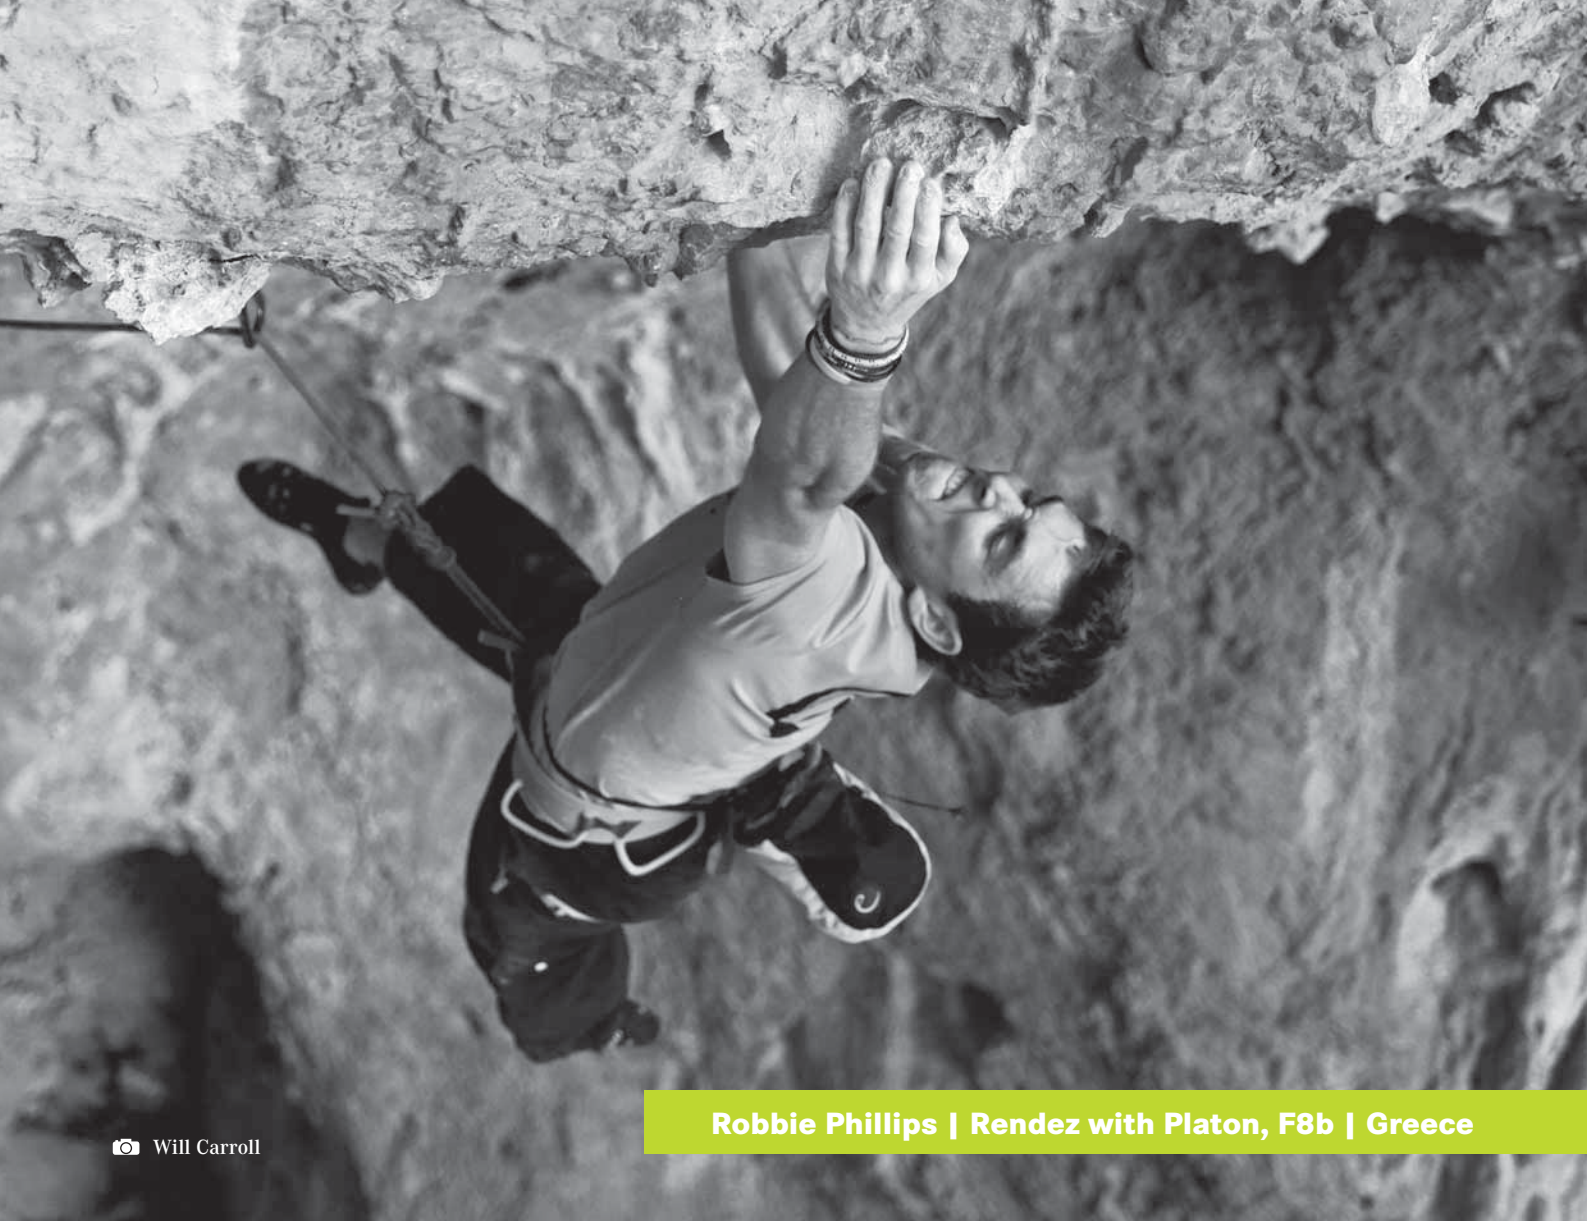

### Kermit

A fully adjustable children's chest harness which is ideal for use with the Finn children's sit harness. Because a child's center of gravity is somewhat higher than adults, the chest harness prevents the child from tipping backwards. The use of a chest harness for young children is particularly recommended as it supports and helps the child feel more comfortable and safe in climbing surroundings. One big advantage of this chest harness is its adjustability range, which allows the harness and child to grow together. The harness design is the classic 8-form, and is adjusted with one buckle. Chest harness should only be used in combination with a sit harness.

# Our Via Ferrata Sets. Your Elevation.

## **OneTouch Karabiner:**

Easy and safe opening of the gate is ensured with pushing the palm latch, preventing pinched fingers in the gate.

## **Patented Variobrake:**

The first ever via ferrata set where braking resistance can be adjusted according to user weight.

## **Elastic webbing:**

Keeps ends as short and compact as possible at all times.

## Cable Vario

**NEW**

Via ferratas are becoming more and more popular. Including for families with children. Via ferrata sets have a shock absorber to prevent falls and minimize the risk of injury. Controlled braking (of the person falling) significantly reduces the fall factor and the resulting impact force on the body and anchor point.

The current safety standard (EN 958) on via ferrata sets requires that they can withstand a 5 m fall with a weight of 80 kg and a maximum impact force of 6 kN. The maximum braking distance may not exceed 1.2 m.

Research using test dummies has shown that shock absorbers designed in accordance with EN 958 have braking distances of only a few centimetres when used by lighter persons weighing 30 kg (Fig 1). This means that these via ferrata sets provide virtually no dynamic shock absorption, and cause substantial impact forces, which could be particularly dangerous for children or lighter users (Fig 2).

The EDELRID Cable Vario has a solution to this design flaw. The Cable Vario is the first ever via ferrata set with braking resistance that can be adjusted according to the weight of the user. The Cable Vario's core component is the newly developed and patented Variobrake. It allows braking resistance to be individually adjusted according to the user's weight, similar to the Z-Value or release setting for ski bindings.

The advantage is clear: a via ferrata set that can be adjusted to suit all users. It ensures a braking distance of 1.2 m and minimizes impact force for children and lighter users (Fig. 3). Serious injuries caused by non-triggered energy absorbing systems is avoided. With the Cable Vario, EDELRID is once again setting new standards for via ferrata safety. The Cable Vario naturally includes tried and trusted EDELRID technology, such as our patented OneTouch carabiners. Together with the elasticated webbing they ensure good handling when clipping or unclipping. The Cable Vario is a compact via ferrata set with "state of the art" safety features.

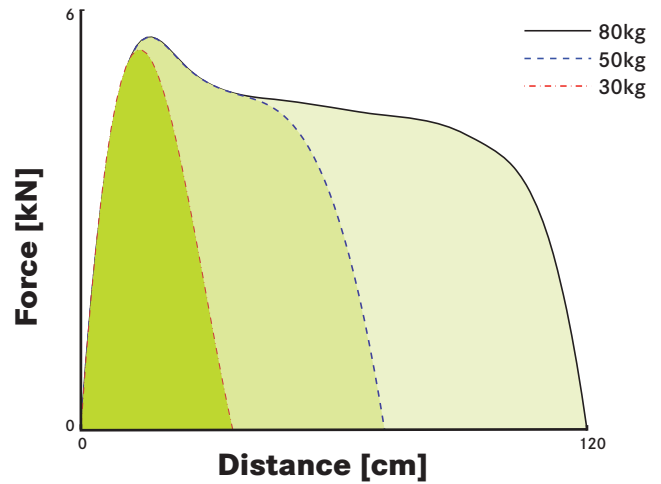

Fig. 1: Conventional via ferrata set: braking distances with 30 kg, 50 kg and 80 kg.

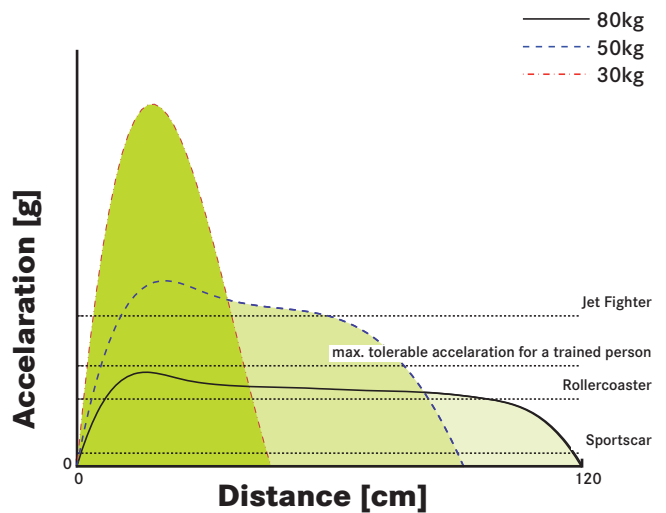

Fig. 2: Conventional Via Ferrata Set: Acceleration with 30 kg, 50 kg and 80 kg.

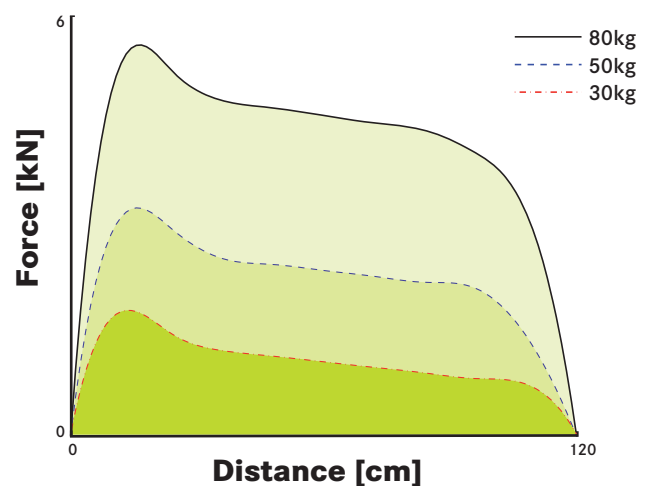

Fig. 3: EDELRID Cable Vario: braking distances with 30 kg, 50 kg and 80 kg.

### Cable Comfort 2.0

**NEW**

The flagship and standard setter, the Cable Comfort Via Ferrata set is fitted with EDELRID patented OneTouch-carabiners offering an ease of use like never before. The patented opening mechanism opens easily just by pushing on the spine and prevents fingers getting stuck between gate and steel cable. The flat laser-formed design prevents the carabiner from breaking in a side load situation. Elastic ends keep the carabiners near to hand and the integrated swivel prevents twisting of the ends. The Cable Comfort set conforms to the EN 958 safety standard.

N°	71674
	460 g
	219 night-oasis

### Cable Kit 4.0

**NEW**

The EDELRID classic in a new design. This innovative via ferrata set has a zippered shock absorber to reduce impact in the event of fall. The absolute highlights are the EDELRID OneTouch carabiners. The patented opening mechanism with automatic closure opens easily just by pushing on the spine. This prevents fingers getting stuck between gate and cable. Its extremely flat, laser-formed design prevents the carabiner from breaking in a side load situation. With its elasticated webbing the Cable Kit 4.0 ensures safe and easy handling. Complies with the EN safety standard 958 and the UIAA standard 128.

N°	71682
	415 g
	219 night-oasis

### Cable Ultralight 2.0

**NEW**

Very light and compact Via Ferrata set at just 270 grams this is one of the lightest and safest sets available. The specially developed webbing for the ends and attachment loop are made of a 12 mm Dyneema®/polyamide yarn mix coupled with the EDELRID super light auto closing carabiners has reduced weight to an absolute minimum. Safety is always a top priority, and despite the exceptionally low weight the Cable Ultralight conforms to the EN 958 safety standard. The Ultralight is so compact, it will fit easily in a jacket pocket.

N°	71681
	285 g
	219 night oasis

## Cable Lite 2.0

NEW

Light and compact for a safe and enjoyable Via Ferrata adventure. The Y construction with elastic ends and shock absorber help keep the carabiner near to the body at all times optimizing ease of handling. Additional safety is provided by the robust Brenta carabiner with palm squeeze mechanism to prevent unintentional opening. The Cable Lite is attached directly via the tape loop to the harness using a lanyard hitch knot. Complies with the EN standard 958.

Nº	71673
	440 g
	219 night-oasis

## Brenta Comfort

A classic Via Ferrata set with rope brake and Y form construction. The integrated swivel prevents twisting and the elasticized ends ensure that the one-hand operation Triton carabiners remain close-by. Attached to the harness via the webbing loop using a lark's foot/girth hitch knot. Tested to EN 958.

Nº	71676
	520 g
	630 slate-pebbles

## Via Ferrata Belay Kit

NEW

It's best not to fall on a via ferrata. This is why EDELRID developed the Via Ferrata Belay Kit. The Via Ferrata Belay Kit is the optimal belay safety set to bring up children or beginners on steep or technical sections of a via ferrata. It consists of a belay plate with automatic self-braking and a 15m single rope with sewn termination at both ends. Comes in a practical packsack and stows easily in any rucksack.

# Our Helmets.

## Your Peace of Mind.

### **Airflow system:**

Large vents prevent heat build-up and ensure a constant supply of fresh air.

### **Wing-Fit system:**

Individual adjustment for a secure and comfortable fit.

### **In-Mold construction:**

Reliable protection, minimal weight.

## Shield II

NEW

An ultralight and robust “soft shell” helmet weighing only 280 grams that provides optimal protection from impact and falling stones. Thanks to its revolutionary Wing-Fit system and rear adjustment dial the Shield II fits all sizes and guarantees outstanding safety and comfort. During transport the cradle folds into the helmet, significantly reducing pack size. The Airflow system will help you keep a cool head; its large side vents prevent heat build-up and ensure a constant supply of fresh air on long alpine routes. Thanks to its innovative closure system under the ear, the chin and neck area remains free from buckles. With four robust head torch clips.

## Madillo

This is, what climbers and alpinists have been dreaming for in a long time. The Madillo is strong and compact, and due to its small pack size it can be stowed easily in the backpack. The shell sides slide into the top and the back folds in, reducing the helmets pack volume by 50%. Other unique features are the shell made of a high-strength abrasion and impact-resistant injected material. Three different foam materials – EPS, EPP and EVA – provide an optimum of comfort and safety. EPS foam is used in the upper half of the shell as it provides the best shock absorption, while the sides are made of EVA which is softer, providing a better and more comfortable fit. The rear panel of the Madillo covers the back of the neck providing additional protection. The size is adjustable from 52 to 62 cm, made so by squeezing the rear panel forwards once the helmet is on your head. A revolutionary helmet to suit everybody's needs.

# Our Climbing Shoes.

## Your Ascent.

### Slide-Rail-Velcro®:

Unique combination of Slipper and Velcro® shoe with removable Slide-Rail-Velcro®.

### 2-Tension-Heel:

Unbeatable hooking performance with revolutionary 2 Tension-Heel.

### Vibram® XS-Grip Sole:

Best possible stick with the tried and tested Vibram® XS-Grip Sole.

## Raven

The Raven is our top-class shoe pre-destined for all those who expect the maximum performance (assistance) from their shoe whether bouldering or climbing. The combination of an asymmetric, extremely cambered last with our specially developed "green" EDELRID heel strap allows a progressive load transmission from the heel into the big toe area. This gives the Raven unparalleled precision when standing on the smallest of edges or when pulling and hooking on steep routes. The Raven can be used as a slipper or with hook and loop band thanks to the unique Slide-Rail® system enabling the removal of the band. The revolutionary 2-Tension-Heel offers unbeatable hooking performance. Vibram® XS-Grip sole for the best coefficient of friction. Form and tension is maintained an upper of synthetic leather.

Nº	72150
SIZE	UK 3-13
	555 g
	138 oasis

## Typhoon

Designed on the same last as the Raven, the Typhoon is the shoe for high-end climbing and offers an aggressive, performance-oriented shoe for demanding boulder problems and sport climbing routes. Thanks to the redeveloped E-Grip Sole, the Typhoon is amazingly sensitive without losing edging stability. The green EDELRID heel strap supports the transmission of power into the toe box and big toe area to keep your foot on the rock, while the high-tension heel cup makes even complicated heel hooks child's play. The upper material combination of soft natural leather in the rear of the shoe and Lorica synthetic leather in the toe box area ensures unbeatable comfort and helps to maintain performance over time. The opposing pull straps and neoprene tongue help the Typhoon fit like a second skin.

Nº	72155
SIZE	UK 3-13
	540 g
	138 oasis

## Sigwa

**NEW**

The Sigwa combines the Typhoon's edging stability with the Raven's outstanding precision. We've made this possible by developing a new, slightly narrower last with a 4 mm E-Grip Sole. The resulting high-end shoe delivers outstanding performance. Its aggressive shape delivers full load transmission onto the tiniest of holds, while the High Tension Heel makes the most difficult of heel hooks a piece of cake. The natural leather upper and Lorica synthetic leather toe box deliver outstanding comfort and maintain form and tension over time.

Nº	72160
SIZE	UK 2-10
	440 g
	330 violet

## Hurricane

A perfectly tuned lace up shoe for all climbing situations. The asymmetric, slightly cambered last offers the right degree of precision, sensitivity and comfort. Whilst the green EDELRID heel strap provides a progressive power transmission to the toe area, the sensitive midsole allows "fatigue free" standing on the smallest of edges. Soft uppers of leather for a perfect fitform and in the toe area of synthetic leather preventing too much stretch. Heel hook performance is optimized with a high-tension full-rubber heel cup with a sole of tried and tested Vibram® XS-Grip for the "stick".

Nº	72151
SIZE	UK 3-13
	500 g
	138 oasis

## Tornado

The Tornado is our all-round weapon. Regardless if you are bouldering, sport climbing or on a multi pitch alpine climb, the Tornado is at home in all climbing situations. Built on the same last as the Hurricane, the Tornado offers the perfect symbiosis of precision, sensitivity and comfort. The two Velcro® straps can be adjusted lengthways and the large Velcro® patch on the shoe permits variability in positioning of the straps. The full tensioned rubber heel cap will help you stick the trickiest of hooks and the Vibram® XS-Grip the smallest edge.

Nº	72157
SIZE	UK 3-13
	560 g
	138 oasis

## Reptile

The Reptile is the perfect shoe for beginners, rental programs, traditionalists or those who just want a comfortable shoe. Offering stability with its straight cut and light asymmetrical form the Reptile is energy saving: Its strengthened midsole gives increased support for the “unseasoned” climbing foot or for long routes. The Comfort Tension Heel provides heel support and the right degree of shoe tension. This construction combined with all-leather uppers and toe start lacing gives the Reptile a comfortable and precise fit for all foot forms.

Nº	72158
SIZE	UK 3-13
	620 g
	138 oasis

## Blizzard

**NEW**

The Blizzard is the most comfortable climbing shoe we've ever made. Its straight cut and asymmetrical form save energy and the reinforced midsole provides increased support for edging or small footholds. Double Velcro® straps enable perfect adjustment and the Comfort Tension Heel provides just the right amount of heel support and shoe tension. High-quality natural leather uppers give the Blizzard a precise and comfortable fit.

Nº	72161
SIZE	UK 3-13
	500 g
	138 oasis

## Tempest

**NEW**

The Tempest is a very comfortable straight cut shoe specially developed for rental use in indoor climbing walls. The tough E Grip sole ensures the best possible lifespan for the shoe and the green rubber on the toe wall indicates when the shoe should be resoled. The Three Velcro® straps and the large opening provide good entry and exit from the shoe. The clearly visible size disc on the heel improves efficiency in sorting the shoes and handing out the right size and the clip button on the heel pull strap helps to keep the pairs together. Full sizes only.

Nº	72159
SIZE	UK 3-13
	530 g
	138 oasis

## Crocy

The perfect shoe for the rock stars of tomorrow, the Crocy's flexible "hinge" patch in the heel area of the shoes expands two whole sizes – advantageous for fast-growing feet. Two Velcro® pull straps assist easy putting on and fitting of the shoe. The soft sole helps to train coordination and precision on small holds. Includes a name plate to write a name and a small surprise!

## **Multipurpose:**

Belay sling, personal belay sling and foot stirrup all in one.

## **Easy glider buckle:**

Comfortable length adjustment without using strength reducing knots.

bluesign®  
product

### **bluesign® approved product:**

A product made using strictly regulated environmentally-friendly processes that contains no harmful substances.

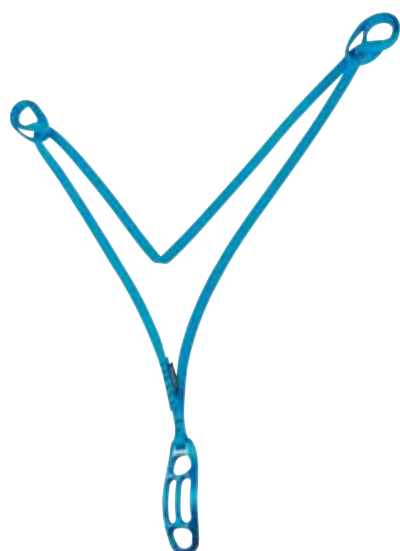

### Adjustable Belay Station Sling

This is the perfection of our already popular belay station sling. The adjustable station sling offers for the first time in a sling, adjustability in the length whatever the situation without having to use additional equipment. An anchor point is fixed with a carabiner and the belay ring. The second anchor point is fixed with a carabiner in the large sling which can then be pulled tight ensuring an even force on the anchor points. This is the first time two anchor points can be joined with an even tension with 22 kN. Other uses include, an adjustable personal belay point, etrier, or for block sling protection.

### Belay Station Sling Deluxe

**NEW**

The Belay Station Sling Deluxe is the latest innovation from EDELRID. This innovative belay sling makes it quicker and easier to set up and manage belays. It has an integrated belay plate instead of a central loop suitable for bringing up two other climbers independently. When abseiling, the belay plate has two separate friction modes. The sewn sling is made of very strong Tech Web and can also be used as a personal belay point. The belay plate even doubles as a bottle opener at the end of the day. What more could you want?

# HELI KOTTER

**Name:** Helmut Kotter  
**Place of residence:** a Rosenheim, Bavaria  
**Date of birthday:** 22.07.1982 in Rosenheim  
**Nationality:** German  
**Marital status:** Single  
**Occupation:** Teacher of mechanical engineering  
**Hobbies:** A little bit of swimming and enjoying the nightlife

## WORDS FROM THE EDGE

**Heli Kotter (28) attracted a lot of attention last year for his repeats of Bellavista (8c) and Panaroma (8c). The two routes first climbed by Alexander Huber on the Cima Ovest/West Peak of Die Drei Zinnen/Tre cime di Lavaredo in the Italian Dolomites are among the hardest alpine routes in the world and represent an important milestone in modern climbing history. More than enough reason for the likeable Bavarian climber to go check them out. Maybe we'll get an insight into the secret of his success.**

**Until now, you were best known for your difficult sport routes such as Mongo (9a) at the Schleier Waterfall in the Wilder Kaiser mountains of Austria. What made you move to alpine routes?**

I've always been passionate about alpine climbing; it's how I got into climbing in the first place! The experience of being surrounded by nature, the mental challenge, the summits ... used to mean more to me than climbing 20 m sport routes. We would walk past boulders shaking our heads. Due to a knee injury, I was forced to stop climbing for several years. Two years ago I felt the urge to climb alpine routes again. I noticed that I forget my sport routes were pretty quickly, while experiences in the mountains remained with me. Having said, that sport climbing does of course have its own particular appeal.

**Bellavista und Panaroma are two of the hardest routes in the Alps. How did you mentally and physically prepare yourself for them?**

My preparations were not exactly ideal. An injured finger put me out of action for four months. I was working and studying for my teacher training qualification for mechanical engineering, but managed to

find time to train three times a week at the wall. From August of the previous year until I travelled to the Cima Ovest, I only climbed 5 times on rock outside. My mental training for the “biggest route on earth” fell by the wayside somewhere in the boulder room.

**You were forced to work hard for Bellavista, but Panaroma took you just 3 days. Did you really find it that much easier or was Bellavista just the perfect preparation for Panaroma? How would you compare the two routes?**

Both routes are demanding in similar ways. The crux sections in Bellavista are protected only by pitons. Panaroma is bolted, but with long run outs up to 12 meters. Panaroma is physically harder. It has a long 60 m (10+) pitch followed by a strenuous 15 m (11-) crux section. Bellavista has most of its difficult climbing concentrated in just one pitch. Both routes require good conditions. If warm air comes in from the valleys and condenses on the cold North Face, there is no chance of a full ascent. Unlike Panaroma, I was unlucky on Bellavista. The route was wet the whole time, apart from two days. This often made the bold climbing on the entry pitches (graded 7-9) pretty dangerous.

**You probably needed a strong and patient partner. Who went with you on your Cima Ovest project?**

My good friend Wolfgang Widder, not only did he belay me, he also climbed a lot Bellavista himself. We were able to motivate and learn from each other. It was really important that we got on well. This is crucial when you are both tired and hungry and stuck at a belay up in the wall.

**Anything you'd like to say to Alexander Huber?**

Respect Alex! His first ascent, alone and in winter represents a far greater achievement than repeating the route. It's amazing to think that he had the vision to climb straight through such a huge roof.

**What fascinates you about climbing the most?**

The whole experience. Being out in nature, the walk in at sunrise, sitting out storms under Baur's Roof (the huge roof on the Cima Ovest), these are experiences that remain with you for the rest of your life. And then there's the sporting element. I really relish working to perfect the combination of power, technique, coordination and mental strength.

**What are your personal climbing highlights?**

My personal milestones are my first 8a Have fun and top and my first 9a Mongo. I was particularly pleased with my redpoint of Grandi Guesti (9a). Alongside Bellavista und Panaroma, my climbing trip to China was an amazing experience.

**How does a typical training day look? Do you train at the crag or at the wall?**

Due to time constrictions, I mainly train at the wall. On a typical day, I get home from work at 17:00. After a short power nap, I go for a cup of coffee and a piece of cake at “Two and a half man”. Then I train from half past seven until closing time.

**You have never really been interested in competitions. Why is that?**

I never liked comparing myself to others, I prefer to compete against myself. Routes are constants. Come back 2 years later and they are still exactly the same. I want to raise my own standards, not compete against others. Any anyway, routes on rock are far more interesting than competitions.

**Where is your favourite spot for climbing?**

It would have to be the Schleier Waterfall in Tyrol, Austria.

**What are your plans for the future?**

I want to climb more tough alpine routes, either repeat or first ascent. When it comes to sport climbing, I want to repeat Weiße Rose (9a+). And as for bouldering, Unendliche Geschichte (Fb8b+) heads up my tick list. I would also really like to travel to South Africa.

**What are your favourite EDELRID products?**

Difficult one. I really like the Creed harness. And I swear by the new clothing, such as the Pants and the McLane soft shell jacket. My favourite rope is the Swift.

**Thanks for your interview.**

- Mc Lane
- Swift

# Our Hardware. Your Tranquility.

## **12 mm Tech Web slings:**

Dyneema® core and polyamide sheath make very thin, very strong slings which improves the abrasion resistance and grip of this quickdraw.

## **Keylock closure:**

Best possible handling when clipping and unclipping.

## **Antitwist:**

Prevents rotation of the lower quickdraw carabiner.

### Pure Dyneema® Wire Set

This quickdraw set is designed just like the Pure Dyneema® Set with the innovative 12 mm Tech Web quickdraw sling but utilizes the Pure wire carabiners. Due to the wire gates, this set reduced the whip-lash effect and the gates won't freeze up. This quickdraw comes with the Antitwist for the lower carabiner.

Nº	71930
	85 g
	10 cm
	360 royal

### Pure Dyneema® Set

The set uses the new Pure Keylock carabiners and innovative EDELRID Tech Web in a 12 mm quickdraw sling with Dyneema® core and a protective polyamide sheath. It comes with the Antitwist for the lower carabiner.

Nº	71931
	90 g
	10 cm
	360 royal

### Pure Wire Set

A quickdraw set with bent and straight wire carabiners from the Pure family. The wire gate minimizes the whip-lash effect and won't freeze up in winter. A 16 mm polyamide sling including Antitwist joins the Pure carabiners in a trustworthy quickdraw set.

Nº	71927
	90 g
	10 cm
	138 oasis

### Pure Set

Classic set with keylock offering the best possible handling when clipping. The Antitwist on the integrated 16 mm Polyamide sling prevents twisting and keeps the lower karabiner in place at all times when unclipping bolts and gear and helps prevent undue abrasion at this point of the sling.

Nº	71929

## Mission

Weighing in at just 25 g, the Mission is one of the lightest carabiners in its class. Despite its minimal weight, the Mission is very robust with breaking strength values of 23-8-7 kN. This has been made possible by combining shape and functionality and removing any excesses. The large gate opening of 20 mm exceeds that of many larger carabiners and provides excellent clipping comfort. The ideal carabiner for alpine tours where material weight reduction and maximum safety reserves are essential.

Nº	<b>71822</b>

## Antitwist

The Antitwist fixes the lower carabiner and sling preventing unwanted rotation of the biner during use. Available for 8, 11 and 16 mm quickdraw slings.

Nº	<b>71722</b>
	017 night

### Catch 22 Set

An ultra light set for ascents at the limit where every gram counts. The Catch 22 Set is a combination of the ultra light Catch 22 straight gate and the Catch 22 bent gate, joined by an 8 mm Dyneema® sling with integrated antitwist. Weight has been reduced to an absolute minimum. The keylock system on the gate ensures perfect handling when clipping and unclipping the karabiners.

Nº	<b>71844</b>

### Catch Wire

An object of desire: The Catch Wire is an extremely strong wire gate carabiner from the Catch family. Thanks to its special hot forging technique and H profile, an exceptional strength-to-weight ratio is achieved - for such a light carabiner, the Catch Wire's maximum breaking strength ratings of 24-7-10 kN speak for themselves. The large gate opening offers the best possible clipping and unclipping, while the large body radius is particularly kind to ropes.

### Conecto Swivel

This ingenious piece of equipment is the first screwable swivel and the most versatile connecting element on the market. The Conecto's technology allows swift and easy replacement of components like energy absorbers or tie-in loops. Ideal for use in work safety, self-rescue systems or for hauling – simply unscrew it, change the components and then screw the swivel back up (torque 4 Nm). The Conecto Swivel has a breaking strength of 15 kN and is certified according to the EN Standard 354.

### Vortex

A compact ball-like swivel of minimal weight and size. Turns reliably even under heavy loads and prevents the twisting of ropes when the load is turning on its own axis. Certified according to the EN standard 354.

Nº	<b>71783</b>
	90 g
	130 oasis-slate

### Conecto

The ultimate connecting ring for use in safety systems or as a rappelling ring on belay stations. The Conecto's design permits easy replacement of components like energy absorbers or tie-in loops by simply unscrewing, changing out the parts, then screwing the ring back up (torque 6 Nm). The Conecto Ring has a breaking strength of 15 kN and is certified according to the EN Standard 354.

Nº	<b>71780</b>
	60 g
	017 night

### Elevator

The Elevator ascenders are light, strong and comfortable in the hand – ideal for caving or big wall use. Like its namesake, this smart tool makes ascending on the rope (8.0 - 13.0 mm) as easy as taking the elevator.

### Rivet Help

An ingenious little bolt hanger you take with to place over bolt heads (up to 10 mm).

Nº	<b>71877</b>
	006 silver

### Sky Hook

Cliffhanger with sewn-in, detachable sling. Available in three sizes.

Nº	<b>71878</b>
	017 night

# Our Belay Devices. Your Safety.

## **Asymmetric Geometry:**

Gives two different braking levels which can be applied depending on the size and ability the belayer.

## **Lock up Release:**

Lock up Release Simple release eyelet for use when bringing up the second.

## Kilo Jul

A universal solid, multi-featured aluminium device for belaying and rappelling on all ropes from 7.8 to 10.5 mm. Feeds well when belaying the leader and can be used to independently bring up to 2 seconds at the same time when climbing in a team of three. The geometric design of the Kilo Jul gives you two braking speeds and the small eyelet allows the unit to be released with a carabiner when bringing up your partner.

Nº	71787
	80 g
	008 slate

## Jul

The Jul is a beautifully styled single rope belay device with a unique two-component construction. The body is made of high-quality stainless steel offering the best possible abrasion resistance with minimal heat conduction. The synthetic cover prevents the annoying „jingling“ on the harness and protects your skin from burning after a prolonged belay or rappel session. An ideal belay device for sport and gym climbing using ropes between 8.9 and 10.5 mm.

Nº	71849
	63 g
	138 oasis
	140 sahara
	017 night
	330 violet

## Eddy

Since its introduction in 2005, the Eddy has established a reputation as a safe and easy to use semi-automatic belay device predominantly for sport and indoor climbing. The Eddy is simple and safe, easy to thread, with the rope logically following the rope flow. A controlled descent with an emergency brake system eliminates the „panic pull“ syndrome which can lead to serious accidents. The Eddy provides maximum safety whether top roping or lead climbing with easy paying out of rope to the leader. Must be used with both hands. For use with single ropes from 9.0 to 11.0 mm diameters.

Nº	75214
	360 g
	017 night

### Zap-O-Mat

The Zap-O-Mat is a semi-automatic belay tool based on the tubestyle belay device. It is considered semi-automatic as the belayer does not have to touch the device to pay out rope evenly and quickly. The braking resistance of the Zap-O-Mat can be adjusted for rope size, new or old ropes, or to climbing style. When the green button is pressed in, rope can be given out faster. When the button is released, the spring in the handle is relaxed and the bolt has less resistance, increasing the braking force. The Zap-O-Mat's integrated carabiner arrest increases the braking power. The Zap-O-Mat is useful when working routes, top roping or when the climber is heavier than the belayer. The unit doesn't have to be removed from the harness to thread the rope, increasing safety and eliminating the risk of being dropped and lost on long routes. Useable for all single ropes from 8.9 to 10.5 mm.

Nº	75215
	158 g
	017 night

### Bud

A classic redesigned sturdy piece of equipment. No further explanation required. For universal usage such as rappelling and belaying.

Nº	71762
	110 g
	663 slate
	360 royal

### Terence

A traditional piece of hardware in a modern and highly functional design. The open V-form in the neck allows for exact and controlled braking, and the synthetic insert holds the carabiner in place while belaying, preventing adverse horizontal forces from being transferred to the spine of the carabiner. At just 56 g, the Terence is one of the lightest in its class.

# Our Ice Gear. Your Cool Tools.

**Hardened steel waterfall pick:**

Ultimate penetration on steep ice.

**Modular System (p.68):**

Quick and easy adjustment according to area of use and conditions.

**Detachable hand rest:**

For a secure grip when climbing without wrist loops.

## Rage

**NEW**

The Rage is an extreme tool for demanding mixed routes and steep ice. Its aggressively curved shaft provides additional clearance, while the balanced construction ensures accurate placement and penetration on rock and ice. The ergonomically-designed double grip and 4 mm hardened steel pick provide optimal precision and control. The pick angle can be easily adjusted via the removable accelerator, a feature popular with extreme ice climbers. Thanks to its modular construction, the Rage can be adapted to suit all conditions.

Nº	71904

## Riot

**NEW**

The Riot is an all-round ice tool designed for technical mountaineering and ice-climbing. Its balanced design and hardened steel waterfall pick guarantees a secure placement on all types of ice. The ergonomically-formed, comfortable double grip ensures excellent control and secure grip when climbing without wrist loops and a detachable hand rest protects the knuckles. With its modular construction, the Riot can be adapted to suit all routes. The perfect ice axe for a wide range of conditions. Available with a hammer and adze.

## Samba

14-point crampon – Our top model for waterfall, steep ice and mixed climbing. The Samba has a sporty design with short vertical teeth for a stable footing on scree. The front teeth are drop-forged and interchangeable from mono to double for the perfect bite in hard ice. EDELRID's Easy Adjust (EA) Bridge enables adjustment of the crampon in seconds even with gloves. Available only with automatic bindings for rigid mountain boots; anti-bot plates included.

Nº	<b>71899</b>
	1020 g
SIZE	UK 5,5-11
	023 pebbles

## Salsa

12-point crampon – Our all-around crampon with mid-sized points for a good hold on scree and good penetration in hard snow and crystallized firn. The Salsa is perfect for everything from glacier treks to steep north walls. The front points are asymmetrical and curved inwards to allow for maximum contact with snow. The Salsa includes EA bridge and anti-bot plates and is available with soft bindings for soft boots, semi-soft for semi-rigid boots, and automatic for rigid boots.

## Your Comfort.

### Integral single walled construction:

Made from siliconised ripstop-polyester.

### Excellent ventilation:

With large side opening and the two apex vents.

### An ingenious idea:

Converts your crash pad into an all-weather luxury bed for 1 to 2 persons!

### Crash Pad tent

An ingenious idea!! This patented tent roof transforms your Crux crash pad into an all-weather traveling luxury covered bed for 1 to 2 persons! The self-standing dome form is wind stable and is quickly put up. The single wall construction made out of siliconized rip-stop nylon (30D) provides a tough resilient shell. The two lightweight aluminium (DAC) tent poles help to reduce weight to a minimum. The side opening and the two apex vents provide good air circulation and make even the smelliest climbing feet bearable. The Crash Pad Tent is delivered in a practical stuff sack with tent pegs, guy lines and repair kit.

Nº	72144
Weight	1500 g
SIZE	210 x 115 x 110 cm
	138 oasis

### Sit Start

The compact Sit Start is the perfect launch pad for difficult and awkward boulder starts or as additional support on a larger crash pad. The practical foot mat in the middle of the pad keeps your shoe soles dry and clean. The alternating open and closed-cell foam construction makes for comfortable fall cushioning. Due to its small size and light weight you can take the Sit Start everywhere.

Nº	72135
	1600 g
SIZE	100 x 55 x 5 cm
	219 night-oasis

### Mantle

The Mantle is our all-around folding pad. With a thickness of 10 cm and the sandwich construction utilizing two different foams, the Mantle offers optimal cushioning and absorption properties. The outer material is strong ballistic nylon making for a very robust and water-repellent shell. The two halves can be zipped together either on the long side (120 x 115 cm / 46.8 x 44.9 inches), or on the end (230 x 60 cm / 89.7 x 23.4 inches), which makes this pad ideal for traverses. Thanks to its modular design and hedonistic level of padding, the Mantle also doubles as a luxury camping mat or guest bed. The Mantle comes complete with foot mat, sturdy shoulder straps, indestructible aluminum buckles and the Sit Start pad.

Nº	72136
	5300 g
SIZE	120 x 115 x 10 cm
	219 night-oasis

### Dead Point

An uncompromising crash pad for maximum safety and cushioning. With a surface area of 140 x 115 cm (54.6 x 44.9 inches) the Dead Point is one of the biggest taco-style pads on the market. The seamless taco design provides optimal fall protection, and the layered construction of varying densities of shock absorbing foam makes this the ideal landing spot for bold boulders. Features include side straps to allow you to store all your other gear inside the pad, shoulder straps, foot mat and the Sit Start launch pad.

Nº	72137
	6000 g
SIZE	140 x 115 x 10 cm
	219 night-oasis

### Crux

The Crux is the ultimate mega crash pad for soft landings and scary highballs, as its four-layered construction of open and closed-cell foam offers exceptional shock absorption. The outer material is strong ballistic nylon making a very robust and water-repellent shell, and the EDELRID foot mat keeps your shoe soles clean. Despite its huge size (210 x 115 x 10 cm / 85.7 x 47 x 4 inches) the Crux is a lightweight (8.4 kg), and its comfortable carrying system allows you to transport it to every boulder with ease. Of course, the Crux also doubles as a luxury sleeping mat after a hard day's bouldering.

Nº	72138
	8400 g
SIZE	210 x 115 x 10 cm
	219 night-oasis

### Cosmic

An oversized chalk bag for quick and easy chalking-up. Fitted with a fleece liner to prevent too much dust and a chalk tight draw pull. The chalk bag is fitted with waist belt and brush holder.

ECO PRODUCT

bluesign®  
approved fabric

Technical and high performance mountain sports gear – that's what VAUDE stands for. Our products stand up to the most extreme demands and have won various awards for their functionality. All VAUDE and EDELRID products can be found at [www.vaude.com](http://www.vaude.com)

**Master of the mountains – the CHALLENGER 35 + 10**  
Professionally equipped Alpine backpack made from bluesign® certified materials with easy-access crampon holder and ice tool attachment.

THE SPIRIT OF  
MOUNTAIN SPORTS

Member of VAUDE Group: EDELRID 

[www.vaude.com](http://www.vaude.com)

**Edelrid in a joint brand group with the German Mountain Sports Supplier VAUDE**

# A team that knows the ropes

**VAUDE offers along  
with performance  
mountain apparel,  
backpacks, tents,  
sleeping bags and more**

The strongest German ‚Seil-partnership‘ in the mountain sports industry is at home in the Lake Constance area: In 2006 VAUDE and EDELRID formed a mountain sports business alliance that in the meantime – resulting from synergies between technological expertise and creative design – has grown into a leading innovation think tank. An extensive range of products can already be attributed to our joint innovation processes.

Having combined forces in a joint brand association, VAUDE and EDELRID are now pioneering their role as the leading full-range outfitter on the outdoor market, spanning the entire apparel and hardware spectrum for all mountain sports and climbing activities.

We’re also making great progress towards achieving our goal of becoming Europe’s most environmentally friendly outdoor company.

Together with bluesign®, the most stringent environmental standard for textiles worldwide, we’re converting our entire manufacturing process to meet maximum standards in ecological compatibility. Products, that feature special environmentally friendly manufacturing, will from now on carry the VAUDE quality label Green Shape.

Our entire range of products, as well as more about our social and ecological commitment can be found on **[www.vaude.com](http://www.vaude.com)**.

# Our Stoves.

## Your Hot Connection.

---

### Suspension attachment:

For safer use in hanging bivouacs.

### 1.8 litre aluminium pot:

With non-stick coating.

---

### Pre heating mechanism:

For unrestricted use even in cold temperatures.

## Stormy EVO

The legendary expedition stove for cooking in the harshest conditions. The suspension of the Stormy EVO permits a safer use of the stove in hanging bivouacs. The integrated windshield increases efficiency by up to 40%. This improves burning and saves fuel. The Stormy EVO's preheating mechanism and piezo starter allows an efficient lighting of the stove even in the coldest of conditions. The Stormy EVO is supplied with an aluminium pot (1.8 l with non-stick coating), and lid. For more flexibility the Ardor Solo non-stick pans can also be used. The Stormy EVO can be packed well with all necessary parts, including a 230 g cartridge, packing inside each other. The Stormy EVO is fuelled by all standard screw gas cartridges.

# Our Stoves.

## Your Independence.

### **Multifuel Stove:**

Optimal fuel supply (gas, gasoline, kerosene) the Hexon burns it all.

### **Tradapter:**

Works with all conventional stormstyle cooking systems.

### **Foldable pot stand:**

A stable base on the ground and for large pots. Minimum pack size.

## Hexon Multifuel

A new generation ultra light multifuel stove. At only 220 g, the EDELRID Hexon Multifuel is one of the lightest stoves in its class. This stove is distinguished by its compactness and versatility (it works with gas, gasoline and kerosene). Further advantages are the foldable feet and pot stand which gives the Hexon Multifuel a stable base on the ground and for the pot as well. With its rugged design allowing for easy use and servicing, a long life is guaranteed. Due to its high quality aluminum alloy construction, the fuel pump is useable at all temperatures. With the EDELRID Tradapter (not included), the Hexon Multifuel is suitable for all storm cooking. The Hexon Multifuel comes with fuel bottle, pump, tool set, wind protection, and transport bag.

# LEGEND

# Ropes

## bluesign®

We are pleased to announce that we are the first rope company world wide to successfully certify our ropes under the stringent bluesign® standards. This Standard Requires that all input streams – from raw materials, to chemical components, to water and energy resources – are analyzed with a sophisticated Input Stream Management process. Every component is assessed from the yarn through to the treatment process and receives a rating based on its eco toxicological impact eliminating potentially harmful substances before production even begins. We have worked on this with a lot of enthusiasm and passion and can say with a good conscience that our ropes are clean. Further information can be found under [www.bluesign.com](http://www.bluesign.com).

## Pro Line

The newest manufacturing technology and a highly elaborate finishing process are the characteristics of the Pro Line. It unites minimal weight and diameters with technical advances and superior handling. This makes the Pro Line your ideal partner for pushing the limits when every gram counts. Pro Line's advantage lies in the new Pro Shield finishing process, one of the newest developments from EDELRID.

## Dry Line

The Dry Line is EDELRID's ideal all-around rope series. Minimal weight, high strength and durability are all perfectly balanced. Ropes treated with the Dry Shield finish are resistant to water, dust and dirt. The Dry Line is the only choice when it comes to choosing a rope for a multiple of activities.

## Sports Line

The Sports Line has become the choice of sport climbing champions. The double-braid construction creates a particularly tight and smooth sheath which is very abrasion resistant and the Thermo Shield treatment provides the famous EDELRID handling characteristics. Those who have tried these ropes once have become permanent, convinced users. Anyone searching for a rope that will be worked hard, the Sports Line is the right choice.

## Entrance Line

Proven EDELRID quality and excellent value for money describes the Entrance Line. The sturdy construction of the Entrance Line makes this rope range a good companion for those starting to climb in and outdoors.

## Pro Shield

With the Pro Shield finish every single core and sheath yarn is covered with a synthetic fluoropolymer coating that is stable and non-toxic. The microscopic ( $10^{-9}$  m) fluoropolymer particles are bonded to the yarns by an electro-chemical process forming an impermeable protective layer. This both reduces the friction between the individual yarns and increases the sliding properties of these yarns, which substantially improves the rope's loading properties. This helps the rope to withstand the external forces (falls) exerted upon it during climbing. Additionally, the rope is well protected against moist and dirty conditions.

## Dry Shield

Dry Shield is a chemical finish for the sheath yarns. The finish is resistant to washing-out, providing a long lasting oleo and hydrophobic coating that keeps water, oily substances and dirt off the fibers. Together with the Thermo Shield treatment, the Dry Shield optimizes handling, abrasion resistance and performance. This all helps to improve the lifespan of the rope.

## Sports Braid

EDELRID's specially developed sheath construction whereby one yarn is crossed by two. The result is a very tight, smooth and flexible sheath structure. This construction method has become synonymous with a particularly high abrasion resistance typical of ropes with this sheath.

## Thermo Shield

The Thermo Shield treatment has been in use at EDELRID for more than 20 years. Thermo Shield is a thermal stabilizing process for the rope that gives it the famous EDELRID handling characteristics and feel. The rope undergoes a heat treatment cure to stabilize and harmonize the individual yarns. This treatment cannot be washed out and ensures a supple rope throughout its working life.

## DuoTec

A new, patented EDELRID process to manufacture bi-colour ropes. The braiding spools are changed halfway through the braiding process to create two distinctly different sheath patterns. Each rope length has a different colour. The DuoTec process ensures permanent marking in middle of rope and a distinctive design. The differently-patterned rope halves are easily identifiable – very useful when abseiling, determining how much rope you have left, or butterfly coiling.

## CLIMBING SHOES

### Radical Last

The Radical Last is EDELRID's high performance last. Acutely asymmetric with a lot of camber and a strong heel pull, the Radical Last guarantees a progressive transmission of power from the foot to the toe box area of the shoe. This in turn provides the perfect pull on overhangs and a peerless precision on the smallest of edges.

### Performance Last

The Performance Last offers maximum precision on small edges. The asymmetric form and the heel pull create a medium camber, resulting in a sensitive shoe. The Performance Last is suitable for wide feet.

### Comfort Last

EDELRID's Comfort Last offers the most comfortable fit possible with a minimum of asymmetry and no camber. This is a shoe last design where comfort is put before precision.

### E-Grip

E-Grip: Edelrid's robust and sturdy rubber sole that has been optimized to provide durability. Formulated for comfortable design climbing shoes.

## HARNESSES

### Slide-Rail-System®

With the Slide-Rail-System® you can individually adjust your gear loops or remove them completely. This could be necessary when, for example climbing with a back pack, on alpine tours or during competitions. Other useful items can be fitted to the harness using the Slide-Rail-System®, for example: chalk bag, gear clip etc..

### Triad-System®

The Triad System is a sewing technique allowing the kettle webbing of the leg loop to be sewn in such a way that it lies flat on the body. The Triad Stitching distributes the load forces evenly throughout the leg loop, resulting in a much better sit and wearing comfort.

### Protector

Hytrel®-Protector increases harness longevity.

### 2-Tension-Heel

2-Tension-Heel: A revolutionary heel construction applying two rubber straps, each with a different level of tension. Tension is thereby applied to the whole heel and not (as with conventional shoes) just on the Achilles tendon. The result is an unbeatable power transmission to the toe box and a heel fit that helps to stick the most difficult hooks.

### High-Tension-Heel

High-Tension-Heel: A full rubber heel cup construction that is ideal for the needs of today's boulderers. The anatomically formed heel cup provides a superior fit and the green EDELRID tension strap builds a perfect and long-lasting camber, while at the same time preventing the shoe from coming off when heel hooking.

### Comfort - Tension-Heel

Comfort-Tension-Heel: A full rubber heel cup with a moderate tension strap offering optimal protection and a snug fit to the heel.

### Vibram® XS-Grip

Vibram® XS-Grip Sole: Developed in 2006, this rubber compound offers a level of adhesion that is 30% better than previous Vibram® soles. XS-Grip rubber guarantees stable and excellent performance whether smearing on the smallest of edges in hot summers, or climbing during cold winters.

### Laminate Technology

With EDELRID's Laminate Technology the outer material, the load bearing fabric and the inner material are all heat sealed together in a lamination process. This permits a much better load distribution throughout the materials, making thick foam and mesh padding unnecessary. The advantages are a weight saving, thin harness that offers maximum movement and the best possible comfort.

### E-Turn

When putting the harness on the webbing side slides into the E-Turn "tunnel" creating a complete circle of waist band. Even under load this cannot separate providing better harness stability and increased comfort. An additional advantage is the buckle is easier to close as you pull across your body and not behind you. The webbing end can also be neatly tucked away whilst climbing.
